

PRODUCT SUMMARY

Managed WiFi

Information About the Service

Managed WiFi is a cloud-managed WiFi subscription solution for businesses. It is designed to provide businesses with powerful and secure WiFi capability at their sites.

The product has the following elements:

Element	Description
Access Points	Devices that create a wireless local area network.
PoE Switch	A device which combines data signals and electrical power into a single ethernet cable connection to minimize the installation & connectivity requirement of Access Points.
Management Service	This cloud-based service capability allows MyRepublic to remotely assist with and troubleshoot any product issues. It also enables MyRepublic to remotely deploy any Access Point software upgrades.

Contract Terms

Managed WiFi is available on 12, 24, and 36 month contract terms. Early termination fees will apply if the service is relinquished by a customer prior to the completion of their contract term.

CPE Ownership

Ownership of the Access Points and PoE switches included with Managed WiFi remains with MyRepublic. MyRepublic reserves the right to swap out these items for the purposes of improved service quality or functionality.

Internet Connectivity

The Managed WiFi service requires internet connectivity (as well as connection to a power supply). This connectivity could be from any available NZ provider, however MyRepublic internet is recommended as the ability to diagnose and remedy customer issues may be hampered if a third-party service is used.

Limitations & qualifications

This service is available to business customers & may not be available in all areas or premises.

The particular Access Points and PoE switches offered as part of the Managed WiFi service may change over time.

Managed WiFi Terms & Conditions apply.
